

A System And Method Of Providing Music Items To Music Renderers

Abstract of the Disclosure

5 A system of providing music items to music renderers. One embodiment of the system comprises an electronic music player that is connected to a plurality of music renderers via device drivers via a music renderer controller. The music renderer controller comprises a device integration application program interface for providing a standard interface for communicating with each of the device drivers. Each of the device drivers manage a selected music renderer. The device drivers receive the music items that are in a predefined format and store the music items on the music renderers
10 upon requests from the electronic music player.
